

October Science Newsletter

We began our Science curriculum this year studying the weather, and what a weather month September was! I hope your child enjoyed learning about rain and wind, helpful and harmful weather, lightning and thunder, and of course, we talked about hurricanes! October's Science Unit will be "Autumn". We will explore apples and pumpkins, as well as trees and their changing leaves! We will have a great time exploring these autumn treasures!

I have enjoyed getting to know your children and hope that Science Class will be a time for them to explore science concepts in a fun, hands-on way. Occasionally, a paper or project may come home from Science Class. Last year we used a large butterfly stamp to mark all Science materials that were sent home. This year we have a frog stamp! So keep an eye out for the frog stamp so that you know which projects came from Science!
